Installing the IPSecuritas IPsec Client: Mac

This section will assist users in the download, installation, and configuration of the IPSecuritas IPsec Client.

Requirements

- GB-OS 5.3.1 or higher
- IPSecuritas IPsec Client 3.4 or above
- User access permissions for Remote Access to a GTA Firewall
- User Configured to use Hybrid + Xauth
- The host name or an IP Address assigned to the firewall's External Interface
- Downloaded client and firewall CA files. All required files may be downloaded via the firewall Web interface.

Important - Downloads for MAC clients only support Hybrid+Xauth mode and CA file downloads.

Accessing the GTA Remote Access Portal for Download

To access the GTA Remote Access Portal, open a Web browser and enter the IP address or host name of your firewall. If the firewall's remote access portal is configured for a port other than 443, append with a colon and port number.

Example: <https://remote-access.gta.com:1443>

Figure 1: Location Bar with Non Standard Port

The login screen for the GTA Remote Access Portal will display. Enter your user login credentials to access the browser. If the virtual keyboard is required, you will have to use the virtual keyboard to enter your password. Use the shift key to access special characters.

Note

Administrators with Remote Access privileges logging in on the administration port will see the normal firewall administration interface and the Remote Access Portal.

Downloading the IPsec Configuration Files and Installers

1. Navigate to **Remote Access>IPsec>Client** for all files needed for download.
2. Click on the **CLIENT INSTALLER DOWNLOAD**. This will download the client.
3. Click on the **CA CERTIFICATE DOWNLOAD** to download the ZIP file containing the required certificates and configuration file.
